

RFID AIM™

Easily Implement RFID-assisted Identification and Management Solutions

RFID AIM allows mobile users to quickly identify things or people, and to query or update back-end databases and applications.

The RFID AIM application is designed to work well on mobile computers, like a netbook or ultra mobile PC. The application is also available on BlackBerry® and Windows Mobile devices.

RFID AIM application consist of two components:

1. A Management Console, that allows an administrator to:
 - a. Define the structure of the RFID tags to be read or written.
 - b. Assign functions to specific tokens within the RFID tag. These functions act as integration points with third party applications.
2. A mobile client that allows the field technician to capture/write information from/to the RFID tag.

RFID AIM Applications is available in three editions: Express, Standard and Professional.

All editions include the mobile client with. Only the Professional Edition includes the Management Console.

Currently RFID AIM works with idBlue® and Tracient® RFID readers, using a USB or Bluetooth connection.

RFID AIM Mobile Client functionality includes:

Asset discovery:

- ⇒ A standalone function that reads all RFID tags within range, and allows the user to view the identifying information stored in the tag.

Integration:

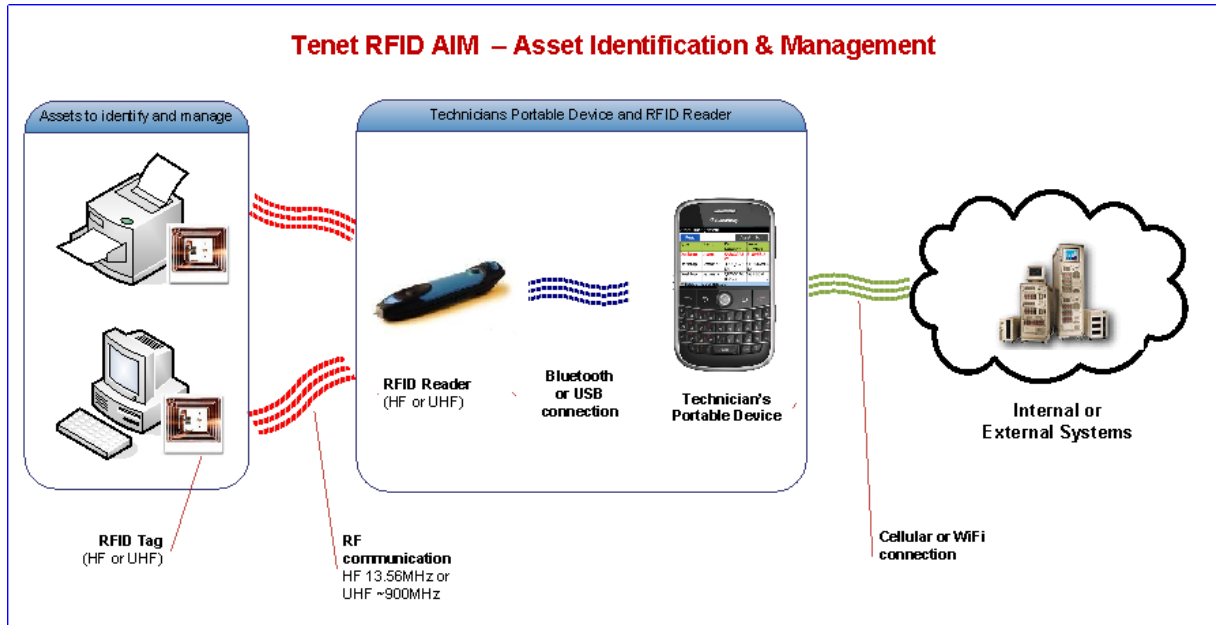

- ⇒ This feature allows the user to select a discovered RFID tag and invoke query or update third party applications through customizable URLs.

Data Export:

- ⇒ After capture, all the data collected can be saved to a local file which can later be uploaded for further processing, e.g. to produce an inventory report.

Asset tagging:

- ⇒ The application also allows authorized users to create or update RFID tags.
- ⇒ The tag's data structure is defined by the Administrator, using the Management Console.
